BorrowBondhu – A Peer-to-Peer Rental Marketplace Platform

1. Introduction

In Bangladesh lots of people have things like projectors, cameras, construction tools and event equipment that they hardly use. At the time many others need these things for a short time but can't afford to buy them.

BorrowBondhu is a website that helps people who have things they don't use often to lend them to others who need them. This way people who lend their things can make some money and the renters can make easy profits.

2. Problem Statement

In Bangladesh:

- Many useful items remain unused in households.
- Students and small businesses often need equipment for a limited time.
- There is no trusted digital platform dedicated to peer-to-peer equipment rental.
- Generic rental services generally lack security, reviews, or modern payment system.

3. Proposed Solution

BorrowBondhu will provide:

- A digital platform for unused personal items rental for renting.
- Secure user registration and login
- Booking and availability management
- Rating and review system
- Payment integration (bKash/Nagad in future phase)

The system will build trust between users through verification, reviews, and clear rental policies.

4. Objectives

The main objectives of BorrowBondhu are:

1. To create a secure and user-friendly marketplace for renting unused belongings.
2. To enable individuals to gain value from unused belongings.
3. To provide affordable short-term access to equipment.
4. To promote the sharing economy in Bangladesh.
5. To reduce unnecessary purchases.

5. Target Users

- University students
- Event organizers
- Freelancers (photographers, designers, etc.)
- Small businesses
- General public

6. Key Features (Minimum Viable Product – MVP)

6.1 User Features

- User registration and login
- Profile management
- Upload and manage listings
- Browse/search items
- Booking request system
- Reviews and ratings

6.2 Admin Features

- User management
- Listing approval
- Dispute handling
- Commission tracking

7. System Architecture

Frontend:

- HTML, CSS, JavaScript (or React)

Backend:

- Node.js with Express or Django/GoLang

Database:

- MongoDB/Postgres

Hosting:

- Firebase / Vercel / Local server

8. Business Model

BorrowBondhu will generate revenue through:

- Commission per successful booking (5-10%)
- Featured listing promotion

9. Expected Impact

- More income scope for individuals
- Affordable access to equipment
- Efficient resource sharing

10. Future Enhancements

- Mobile application (Android/iOS)
- Online payment gateway integration
- Delivery logistics integration
- Security deposit system

- Identity verification (NID-based)

11. Conclusion

BorrowBondhu aims to create a market for renting unused personal belongings. The platform will use technology to help people make money from things they do not use and also make it easier for others to get the equipment they need at a cost.
